

## FAST-TRACK HIRE FILTRATION SERVICE

The decision to invest in high value CAPEX projects can be challenging and time-consuming, particularly if the requirement is immediate and a high priority.

With this in mind, filtration specialists Axiom Process, have launched a membrane separation rental service developed specifically to bypass traditional concerns and provide a fast-track solution.

Offering great flexibility and suitable for many liquid processing applications, Axium's **UF2Go** and **RO2Go** crossflow systems have been developed for rapid filtration solutions. Backed up with extensive technical expertise, Axiom can fulfill high-priority requirements swiftly from their range of universally adaptable membrane filtration options.

Able to meet industrial scale demand for most types of liquid processing requirements, and with environmental concerns top of the list, Axium's new service is a valuable resource for those needing a fast or temporary technical filtration solution that would normally involve detailed research and committing to large capital investment.

"The UF2Go and RO2Go crossflow systems provide an exceptionally practical solution for urgent filtration needs," states Derek Davies, Business Development Director at Axiom Process. "Since it's available through a rental model typically using OPEX, which bypasses the usual CAPEX restrictions but allows observation of long-term trends, which is ideal for situations where a permanent installation may be required at a future point."

Quick to install and easy to use, there are a vast array of applications for Axium's systems across many different industries, including manufacturing, pharmaceutical, food, beverage, dairy and water recycling.

From the removal of suspended solids and organic impurities to wastewater recovery, high-value protein extraction, or even to support occasional high-demand situations, this versatile concept is built on reliable tried-and-tested technology used by multiple leading brands.

Both the "UF2Go and RO2Go are designed for easy deployment and minimal operator intervention, each system can be up and running in a matter of hours. During installation and commissioning full operator training will be conducted by one of our engineers."

"We are excited to offer this level of flexibility and support for our customers, in today's world we understand the need for businesses to find simpler, more cost-effective solutions for everyday problems, be it a planned investigation, emergency, or temporary requirement," says Derek.

Axiom Process is one of the UK's leading membrane filtration system manufacturers specialising in Microfiltration, Ultrafiltration, Nanofiltration and Reverse Osmosis technology.
